HOW TO ANDROID SMS

www.smsplus.in

Android SMS: Introduction

Even though mobile phones have evolved drastically but the relevance of **Android SMS** even in today's era has not faded a bit. No matter how crucial other messaging platforms would have becomes for us but we are yet to find a proper replacement for **Android SMS**. Even today, billions of text messages are sent and received everyday across the globe.

Infact, after the emergence of android phones as a dominant factor, the power of SMS texts has actually gone up. The additions in the android phones have made SMS texts far more sophisticated. Now we have the facility of sending long text messages along with multimedia content, which was not possible a decade back. Nobody can deny the fact that the importance of SMS in today's market is intact despite presence of mediums like WhatsApp and email.

How Android SMS works?

The messaging feature on android generally works on the global cellular network supported by the network of towers installed around the globe. In order to send or receive a message your phone must have the connectivity to any adjacent tower. Once your phone establishes communication with the tower, the control channel carves the path for the message. So when the message is sent, it goes to the SMS center via nearby tower. The SMSC then forwards the message to the nearest tower located to the destination of the message and thereafter it reaches the receiver.

Is there any app or website for sending SMS from Android phone?
